- Prescription Eye Protection

# We Protect People.

## Something About Us

As leading innovators in the manufacture and supply of Personal Protective Equipment, we believe that PPE should provide excellent protection along with maximum comfort and style. That's why our range is designed with care using the latest materials and manufacturing techniques.

Choosing the right protective gloves and eyewear from MCR Safety will provide optimum protection regardless of your working environment and our technological expertise ensures confidence to face challenges as they occur.

We have a heritage that goes back over sixty years and in that time we've gone from strength to strength. We're now proud to operate on global scale with an office in the UK, Netherlands (opening 2021), USA, Africa and Asia.

Whether it's globally, nationally or just round the corner, we're here to help. We want to provide you with the most appropriate PPE solution for your individual needs. For us it's not just a simple transaction, we offer a full supporting service to enrich your experience as a true partner of MCR Safety.

# **Commitment and Support.** **With Over 60 Years Experience**

## **Committed.**

We pride ourselves on providing an exemplary customer support service to all of our partners. You can always speak to us directly about our range of products and services.

## **Solutions.**

Identifying the right product or service is not always an easy or quick process. Our highly trained sales and support teams can guide you to the perfect solution tailored just for you.

## **Technology.**

Advanced innovation allows our teams to develop protective products which are packed with state of the art technology and supported by Zero Touch systems.

# Advanced Technology.

We have over 60 years of experience in the manufacture and supply of safety gloves. The knowledge and expertise we have amassed enables us to create our diverse range of hand protection.

We use an extensive number of technologies that can be applied together or in isolation to produce gloves with properties suitable for specific tasks and operations across multiple industry sectors.

We define our technologies as the individual components, applications or processes that can be applied to yarns, dips, coatings or any other element of the glove or it's construction.

These technologies have been developed over years of research, scientific experimentation and testing. We are at the forefront of new thinking, pushing the boundaries and constantly striving for improvement. Our strategy is always to invest in the future of industrial safety.

We work continuously with businesses to develop hand protection for their specific needs. We explore new materials and manufacturing techniques so we can maintain our position as market leaders for hand protection.

## Advanced Technologies Designed For You

We will work with you to identify the best protection for your team.

# Scan the unique QR code for the full specification and technical information.

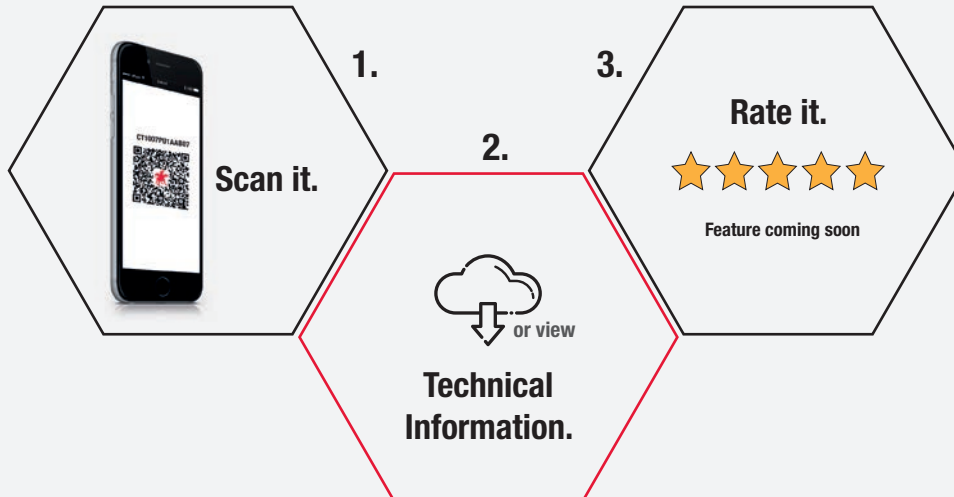

Our safety gloves and arm protectors have a small label sewn inside which carries our address and contact details; this is standard for all work-wear in accordance with the PPE Regulation.

## We Add Value

We like to add value by also including a QR code. The QR code is a gateway to a wealth of helpful and interesting information about the glove. Every glove or arm protector in our range has its own individual code that, when scanned, will link back to the product page on our website. You'll be able to view the full specification including images and technical information, read about the features and benefits, learn about construction and composite materials, plus you can see where the glove is used and by which industry sectors.

This is all relevant information and can be accessed by simply scanning the QR code with a smart phone camera or QR app.

This feature was devised with the end-user in mind as a quick and easy way to access additional information about the glove on your hand.

Quickly review performance levels

# Good, Better, Best

We have categorised our products into Good, Better and Best based on the technologies of the product.

## Your Easy Step Guide

Glove example

1.

Select Your Shell

2.

Select Your Coating

3.

See Your Options

Good

Basic Technology

Better

Good Technology

Best

Advanced Technology

The graph illustrates the relationship between technology/cost and product categories. The vertical axis is labeled 'Technology / Cost' with 'Low' at the bottom and 'High' at the top. The horizontal axis shows three categories: 'Good', 'Better', and 'Best'. A red arrow starts at the 'Good' level on the low axis and points diagonally upwards to the 'Best' level on the high axis, showing a positive correlation between category and technology/cost.

Performance of safety standards is never compromised within each category. Good, Better, Best is not based on CE performance of the product but the technology the product provides.
